PRODUCT DATA SHEET

GuardPoint Insight

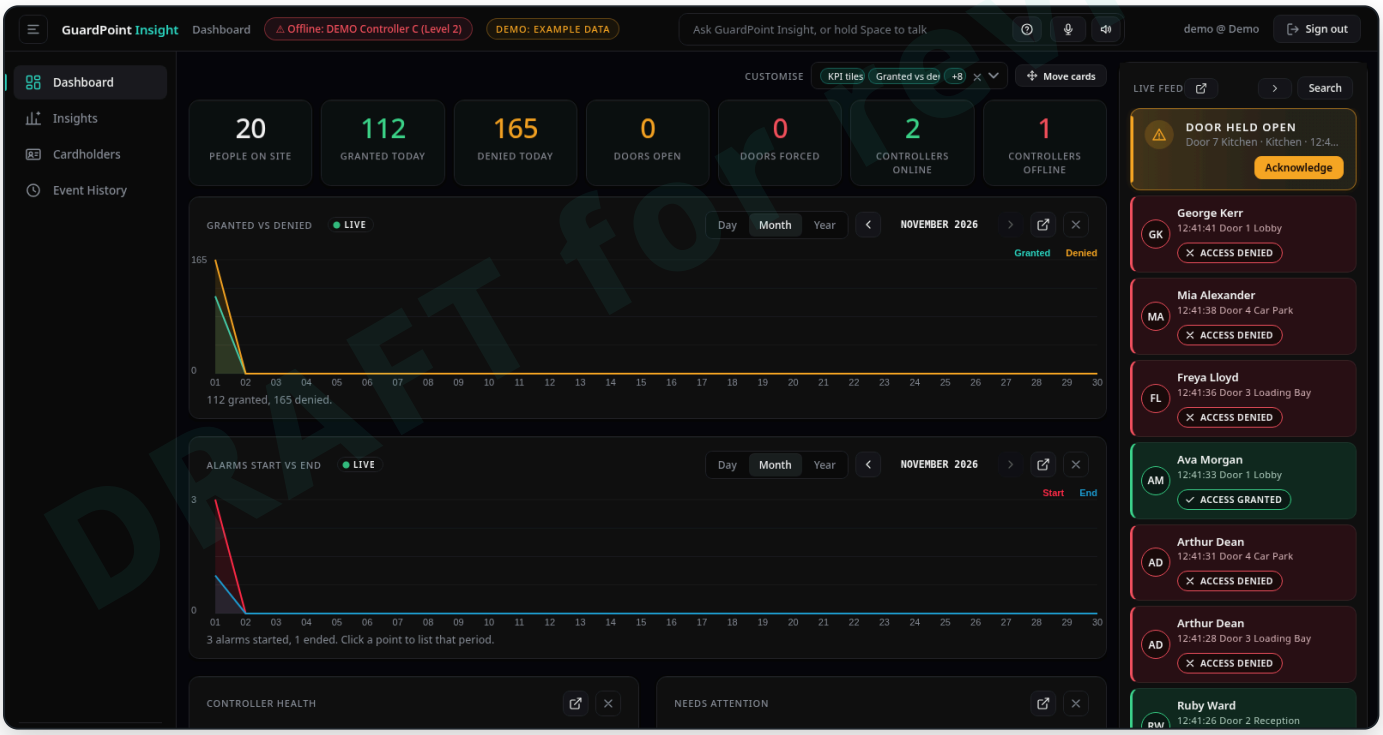
Desktop analytics and live monitoring for GuardPoint10 access control

Windows 10 and 11 | Works with GuardPoint10 | Version 0.5 (pre-release)

Overview

GuardPoint Insight is a desktop companion app for GuardPoint10 and GuardPointXI access control software. It gives security and facilities teams a clear, live view of what is happening across their site: access events as they happen, alarms that need attention, controllers that have gone offline, and the patterns behind the numbers.

It connects to GuardPoint10 through its API, read-only by default, so you can add it to an existing system without changing how the system is run.



Dashboard with live feed, live charts and an alarm pinned in the feed. Shown in demo mode with example data.

Key features

Live dashboard

A live feed of access events alongside live updating charts, so you can see activity across the site at a glance.

Alarms pinned in the live feed

Alarms appear at the top of the feed as red or amber cards with icons. Acknowledge an alarm straight from the card.

Offline controllers badge

Shows which controllers are offline, or "All controllers online" in green when everything is connected.

Event History

Choose Access events, Alarm events or Both, then export to CSV or print. Alarm reports include type, source and severity columns, and show only data GP10 provides.

DRAFT for review

Insights

- Activity heat map, overall and by person
- Impossible travel detection
- Denied access analysis
- Out-of-hours activity against configurable working hours (default Mon to Fri, 07:00 to 19:00, with overrides)

AI assistant

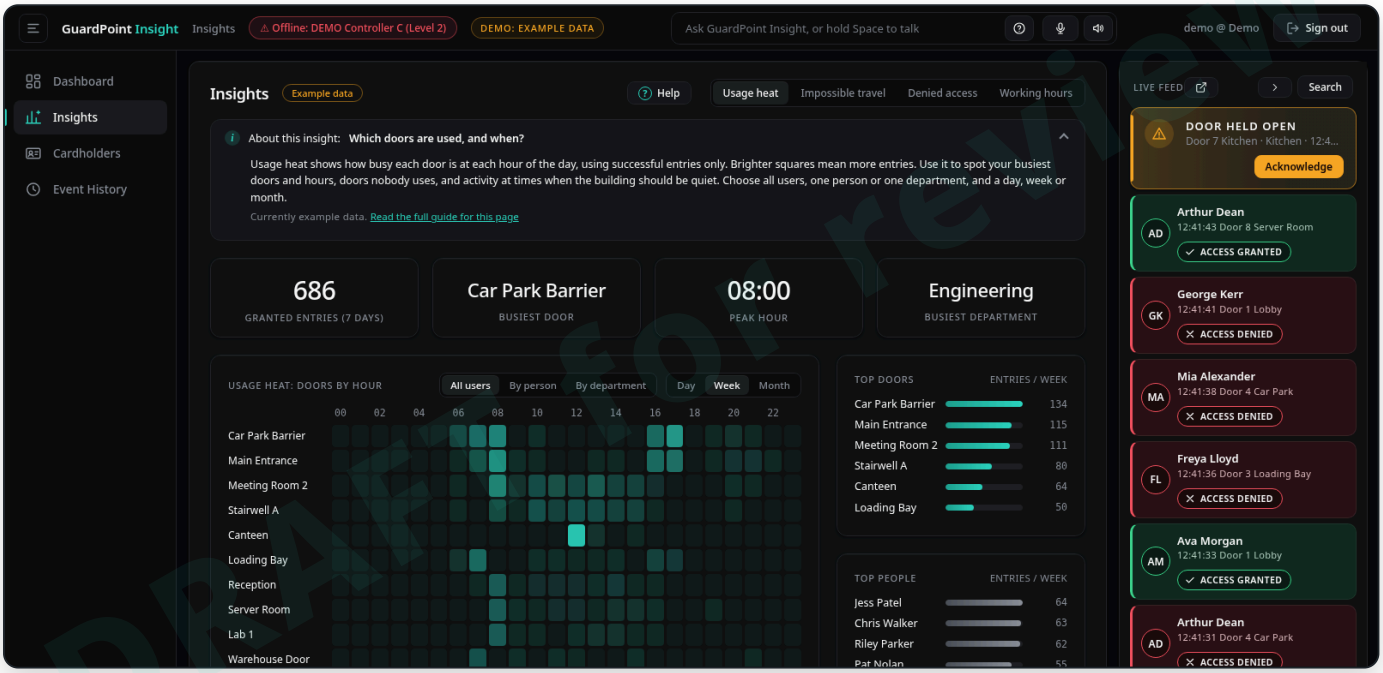
Ask questions about your system in plain language, with voice input, mute and a live transcript. When it does not know an answer it says so rather than guessing. It can work with a local AI model on your own network.

Cardholders

See each cardholder's Area (where they were last seen) and export the list to Excel. Open views in pop-out windows to keep them on screen alongside the dashboard.

Built-in help guide

A Help button and "About this insight" notes on each tab explain what you are looking at and how to use it.



Insights: activity heat map with "About this insight" notes. Shown in demo mode with example data.

Technical highlights

Operating system	Windows 10 and Windows 11
Footprint	Lightweight desktop app that uses system fonts
Compatibility	GuardPoint10 version 1.160 and above, and all versions of GuardPointXI
API module	Requires the GuardPoint API module. Read-only by default; live actions are off unless enabled by an administrator
Demo mode	Explore the app with example data before connecting to a live system
Version	0.5 (pre-release)
